

Media Release – Australian Subsea Export Hub launches Submerged.

The **Australian Subsea Export Hub**, an initiative of the Australian Government, has recently launched Submerged. [Submerged](#) is a comprehensive directory of capabilities and technologies for the Australian subsea and ocean-based industry, created by [Subsea Energy Australia](#) and [Subsea Innovation Cluster Australia \(SICA\)](#).

With emphasis on the significant number of small to medium companies in the Australian subsea and ocean-based sector, Submerged demonstrates the agility and strength of these organisations, displaying world leading technologies. Australian SMEs create innovative solutions to the unique problems and challenges that the region presents such as remote operations, long distance tie-backs and cyclones. Submerged provides a comprehensive guide to the capabilities and technologies that make up the Australian subsea ecosystem including fisheries, energy, defence, surveillance and more. This information is available to companies globally.

All companies listed within the directory provide an overview and summary of their offerings, allowing users to clearly identify crucial information. Australian SMEs lead the way globally in developing world leading technologies and capabilities. It is anticipated that Submerged will provide a platform for international growth through increased visibility.

If you would like your company to be listed here, or if you would like to add any information, please contact Colin McIvor, colinmcivor@sica.org.au. For general information regarding the Australian Subsea Export Hub, contact Maud Kay, maud.kay@subseaenergy.org.au.
