

Media Release – Networking Breakfast, July 28th 2021

Subsea Energy Australia were joined by members for a gourmet networking breakfast on July 28th at the DoubleTree by Hilton, featuring guest speaker Mario Fazio of Oil Spill Response Limited.

Mario treated attendees to an informative presentation about how Oil Spill Response Limited can assist the industry to prepare for and respond to a subsea well blowout. Guests also learnt about how Oil Spill Response Limited is an industry-owned and funded cooperative which exists to respond effectively to oil spills anywhere, anytime. Mario discussed the various ways in which a subsea well blowout can impact industry and the environment, placing a particular focus on the safe soft shut method of utilising capping stacks. In the unlikely event of a subsea well control incident, the capping stack provides a temporary solution to stop an uncontrolled release of hydrocarbons to the environment.

The presentation featured plenty of information regarding the many innovations utilised by Oil Spill Response in their efforts to prevent and combat subsea well blowouts. Networking followed breakfast, with attendees in agreement over the success of the highly informative session.
